

# Environmental Baseline Studies

The studies collect information on the environment in and around the Waisoi Project area. This would be used to identify potential project impacts and how to manage them.

*River and stream water – assessing quality and quantity*

*Ecology – identifying plants and animals, and their values*

*Groundwater – assessing quality and quantity*

*Soil – studying its composition*

*Noise and dust – measuring levels*

*Aquatic ecology – assessing ecology of river systems*

## Analysing Environmental Samples

Environmental samples are sent to laboratories in Australia for analysis.

*Analysing water samples*

*Assessing waste (tailings) quality*

## Questions about the Environmental and Social Impact Assessment Studies?
